PROFESSIONAL SUMMARY

Backend Engineer with 3+ years shipping production systems across healthcare and state-owned financial services. Owns backend quality gates and cloud observability (OpenShift / GCP) for platforms serving 20,000+ users, and has delivered national health-data interoperability (SATUSEHAT/FHIR) and hospital systems for Indonesia's largest hospital group. Trusted beyond code — leads vendor code reviews and drives releases across Security, Infrastructure, and Release Management.

PROFESSIONAL EXPERIENCE

PT Pegadaian (Persero) — Backend Engineer

Oct 2024 – Present

- Own the backend quality gate for **ARALIA**, the company-wide attendance system used daily by 20,000+ employees — lead code reviews of all vendor deliverables and coordinate security sign-off, infrastructure capacity, and release scheduling across 3 internal divisions.
- Monitor and troubleshoot production integrations using cloud-native observability tooling on **GCP (Cloud Run logs & metrics for ARALIA)** and **OpenShift / OCP** (for iLeads) — performing root-cause analysis on deployment and integration failures and configuring/monitoring dev environments to keep releases stable.
- Example: when the **iLeads-LinkedIn Learning** sync showed intermittent failures, traced the cause through OCP deployment and service logs, identified the breaking integration step during rollout, and reconfigured the dev service to restore a smooth, reliable sync for 20,000+ employee training records.
- Built a **Customer Experience Management dashboard** (Vue.js + Node.js) consolidating WhatsApp survey feedback across 5 product lines into a single real-time view — replacing manual spreadsheet reporting and cutting feedback-analysis turnaround from 7+ days to same-day.
- Integrated the **iLeads** platform with LinkedIn Learning via REST API, automating training-record synchronization for 20,000+ employees and eliminating roughly one full workday per week of manual HR data entry.

AIDO Health — Associate Software Engineer

May 2024 – Sep 2024

- Developed **clinic and hospital management modules** (patient records, medical history, operational workflows) for AIDO's Hospita and Klinika products, deployed across 90+ healthcare clients.
- Engineered **SATUSEHAT (Ministry of Health) integration** using FHIR-based APIs, achieving national interoperability compliance and connecting an ecosystem of 1M+ patient records to the national health-data network.

Bithealth — Associate Software Engineer

Mar 2023 – May 2024

- Built a **Doctor Management System** for Siloam Hospitals (Indonesia's largest private network, 40+ hospitals) managing profiles, schedules, and multi-location assignments for 2,700+ general practitioners and specialists.
- Delivered the first **centralized admin dashboard and CMS** to unify previously siloed hospital databases, replacing a fragmented manual process with a single real-time source of physician scheduling data across all locations.

TECHNICAL SKILLS

- Backend:** Node.js, Express.js, REST API design, microservices, JWT/OAuth, Redis caching
- Cloud & Observability:** GCP (Cloud Run), OpenShift (OCP), log/metrics monitoring, root-cause analysis (RCA), dev-environment configuration, Docker, CI/CD pipelines
- Frontend:** Vue.js, React, React Native
- Databases:** PostgreSQL, MySQL, MongoDB, Redis
- Tools:** Git, Jira, Agile/Scrum
- Domain:** Healthcare interoperability (SATUSEHAT/FHIR), enterprise HR systems, vendor management & code review

EDUCATION

Hacktiv8 — Fullstack JavaScript Immersive (16-week intensive)

Aug 2022 – Dec 2022

- Graduated 82.3/100. Curriculum: Node.js, Vue.js, React, React Native, PostgreSQL, MongoDB, Redis.

Yogyakarta State University — Bachelor's Degree (Cum Laude)

Aug 2017 – Dec 2021

- Student Executive Board (BEM) leadership; national academic competition participant (PKM).

Languages: Bahasa Indonesia (native) · English (professional working proficiency)
